Discover Energy Integrated Plan

About this Energy Plan

This Energy Plan also known as the VPP Energy Plan under the Virtual Power Plant Terms (**Terms**) and is an offer to supply electricity and VPP services to NSW electricity customers who have an eligible solar system and battery installed at the premises and have nominated Discover Energy as their Demand Response Aggregator and Green Deal Operations Pty Ltd (ACN 649 507 040) (GD Operations) as the Accredited Certificate Provider (ACP) on their BESS2 Nomination forms.

Energy Plan Period

This plan is ongoing with no fixed term. It commences on the date we accept your application or the date we begin supplying electricity to your premises.

Charges

You will be placed on a time-of-use tariff that includes different usage rates based on the time of day, as set out in the Details section.

The charges under this energy plan are variable; this means your usage charges, supply charges and any other applicable fees or charges (including payment processing fees) may change during the Energy Plan period, where permitted under your agreement or applicable laws.

Variations Details

Price Increases: We will only increase your tariffs or charges, or decrease your feed-in tariff, once per year. Any such variation will take effect for your account during our annual price review, which usually occurs in July each year.

Price Decreases: We may decrease your tariffs or charges, or increase your feed-in tariff, at any time during the year.

Exceptions: Timing restrictions do not apply if a variation to your tariffs, charges, or energy payments is a direct result of a tariff reassignment made by your local network distributor.

Notification of Changes: If we vary your tariffs, charges, or energy payments, we will provide you with written notice of at least 5 business days prior to the change taking effect, in accordance with applicable energy laws and regulations.

Benefits

- Guaranteed 20% discount on usage rates
- A once-off sign-up credit of up $50.00 applicable once your device is onboarded to our VPP platform.
    - Sign up Credits are used to offset any supply and usage charges accrued under this energy plan. Sign-up credits are non-transferable, non-refundable and cannot be redeemed for cash.
- A feed-in tariff for electricity exported to the grid, with different export rates applying at different times of the day, as set out in the Details section.
- Earn a base FiT of 25c/kWh for energy exported from your battery to the grid by Discover Energy
- 50% of net profits earned from energy exported from your battery to the grid by Discover Energy during a VPP event.

Profit Formula: (Wholesale Price - Base Rate) × kWh Discharged × Profit Share = Profit Amount

How each component is determined:

- **Wholesale Price:** The market price per kWh for the 30-minute interval during which the trade occurred.
- **Base Rate:** The base solar feed-in rate (25c/kWh) you are guaranteed for the discharged energy. Profit is anything earned *above* this rate.
- **kWh Discharged:** The total electricity exported from your battery during the trade.
- **Profit Share:** You keep 50% of remaining profit after base rates are paid.

Trade Safeguards

If Discover Energy initiates an energy trade and the wholesale spot price drops below the $0.25/kWh base rate, you are guaranteed to receive the standard base rate payout. Discover Energy will absorb any financial loss associated with this trade.

Eligibility Requirements

To be eligible for this Energy Plan, you must:

- Be a new VPP customer joining Discover Energy's VPP platform for the first time.
- Be introduced to this offer directly by a Discover Energy partner
- Be located in New South Wales
- Sign and complete the relevant nomination form with the Accredited Certificate Provider Green Deal Operations, nominating Discover Energy as your Virtual Power Plant Operator
- Have a *compatible battery system with a capacity greater than 5kWh and less than 50kWh;
- Have a smart meter installed at the premises;
- Have a compatible net-metered solar PV system;
- Ensure your inverter maintains a reliable internet or Wi-Fi connection;
- Connect your eligible device to the Discover Energy VPP platform and authorise Discover Energy to remotely control and operate your battery for VPP purposes; and
- Not have any registered life support requirements at the premises.

You must continue to satisfy these eligibility requirements throughout the Energy Plan period. If you no longer meet the eligibility requirements, this Energy Plan may end.

Ending this Energy Plan

If the Agreement under which we supply you with energy ends, this Energy Plan will also terminate, including if you move to another address. We may terminate this Energy Plan in any of the circumstances set out in the Agreement Terms. You may terminate this Energy Plan at any time.

*A list of compatible manufacturers can be viewed on our webpage
www.discoverenergy.com.au/vpp
Individual battery models must be approved by the Clean Energy Council (CEC)

Note: Subject to applicable eligibility requirements, including all relevant BESS2 eligibility criteria for your battery and solar system.
